Step By Step Doi Link Generation For Journal

how to get doi number for journal articles

- A DOI (Digital Object Identifier) link generator is a tool or service that helps you create a direct and persistent link to a digital object identified by its DOI. These tools can be useful for creating clickable links that reliably lead to the referenced digital content. Here's how to generate a DOI link:
- Understand the DOI: First, you need to have a valid DOI for the digital object you want to link to. A DOI typically looks like this: 10.xxxx/xxxxxx, with the "10.xxxx" prefix representing the publisher or registration agency, and the "xxxxxx" portion being a unique identifier for the specific object.

- Manually Create a DOI Link: You can create a DOI link manually by adding the DOI to the end of a DOI resolver URL, such as "https://doie.org/". For example, if your DOI is "10.xxxx/xxxxxx," your DOI link would be "https://doie.org/10.xxxx/xxxxxx."
-
- Use a DOI Link Generator: Some websites and tools offer DOI link generation services that automate the process. You input the DOI, and the tool generates the DOI link for you. As of my last update in September 2021, Digital Online Identifier (DOI) Engine provides a simple DOI resolver that can be used to create DOI links.

Here's how to generate a DOI link using Digital Online Identifier (DOI) Engine resolver:

1. Go to the Digital Online Identifier (DOI) Engine resolver website: https://www.doie.org/
2. Sign Up
3. Enter the Required Details you want to create a link for in the input field.
4. Click the "Generate" button.

The page will redirect you to the full DOI link, which you can copy and use in your documents, websites, or references.

Thanks
